Beginning May 1, all Kodiak commercial sac roe herring fishermen that wish to continue fishing must be registered with the department. Registration may be accomplished either in the Kodiak fish and game office, or with fish and game personnel when available in the field. Communication is critical to effectively manage the commercial herring fishery. **Herring fishermen will need to contact the department prior to fishing in an area and when herring are harvested. Failure to do so will result in area closures.**

The current estimate of the total harvested herring in the Kodiak Management Area is approximately 4,300 tons.

The following areas are closed to commercial herring fishing for the remainder of the season:

- The East Sitkalidak, West Sitkalidak, Outer Kiliuda Bay, Inner Kiliuda Bay, Barling Bay, Inner Ugak Bay and Outer Ugak Bay sections of the Eastside District.
- The Village Islands/Uganik Bay sections and the Terror Bay Section of the Uganik District.
- The Danger Bay Section of the Afognak districts.
- The Kizhuyak Bay Section of the Inner Marmot District.

The remainder of the Kodiak Area will stay closed to commercial herring fishing for the entire sac roe season.

Guideline harvest levels and maps of open sections and gear assignments are available at the Kodiak office and in the herring sac roe fishery harvest strategy for the 2012 season. Fishermen are urged to check with their market and test their catch prior to landing herring. Determining if size or roe quality meets processor standards is the responsibility of fishermen and industry. It is anticipated that many small and green fish will be present on the grounds during the initial open fishing periods. Recent fishery information may be obtained by calling the Departments 24-hour record-a-phone at 486-4559.
